

HOMEWORK 3 - CARD GAME

CS 102, Fall 2021/2022

Student: Deniz Tuna Onguner

Bilkent ID: 22001788

Instructor: Uğur Güdükbay

Section: 01

REFLECTIONS

It was quite hard to complete this particular program, and run it successfully. There was not enough explanations (comments etc.) neither on the code nor on the instructions document. Most of the time was used to understand what is expected and the rest of the time was to integrate new written codes with former ones. Doubtlessly, typing a new card game from the rough would be much more easier compared to the complaining a half written one. It was too sad for me to say that I couldn't manage to complete the code in order to be run, even though I have spent enormous time on it. It would be perfect if we were charged to write our own code. In such a scenario, understanding everything and act properly would be easier. It also would be better if the expectations and instructions were detailed.

On the other hand, such an activity is required for an efficient teamwork. Understanding others' codes and integrating or fixing them if necessary is an essential part of a teamwork. It seems I personally should improve myself on reading codes and integrating them.
